

INVESTMENT PHILOSOPHY

We believe:

- Investment behavior creates opportunities that passive management does not fully capture.
- A systematic, disciplined investment process incorporating both quantitative and qualitative elements identifies companies with above-average return potential.

WRIGHT QUALITY RATINGS

Each quadrant has eight fundamental measures that evaluate a company's overall quality.

PRODUCT PROFILE

Objective

Consistently outperform the benchmark over a market cycle

Benchmark

Russell 1000 Growth Index

Maximum Position

5% of Portfolio

Number of Holdings

100-130

For over 50 years, Wright Investors' Service has been a pioneer in systematically collecting and analyzing fundamental financial information. Wright offers investment management services to institutions, bank and trust companies and individual investors.

Large Cap Growth Equity
Performance Supplement

Organization. Wright Investors' Service, Inc. ("WIS" or the "Company"), a wholly owned subsidiary of The Winthrop Corporation, is an independent investment management and advisory organization that provides investment services to institutional and individual investors. The management of assets is primarily implemented through the disciplined application of a series of quantitative and qualitative methods intended to achieve the investment objectives of each client.

Composite Matters. The Wright Large Cap Growth Equity Composite consists of accounts typically comprised of 100 - 130 U.S. equities diversified across all economic sectors as defined by its performance benchmark, the Russell 1000 Growth Index. Accounts in the Large Cap Growth Equity Composite may contain up to 30% of their market value in securities with less than \$5 billion in market capitalization. The investment approach is to seek the best of the growth stocks and potentially achieve higher risk adjusted returns. An account is eligible for inclusion in the composite if it is an actual, fee-paying, discretionary account with at least \$225,000 in net assets. Prior to March 31, 2010, the minimum account size for the composite was \$500,000 in net assets. A new account is included in the composite during the first full calendar month (quarter prior to June 30, 2003) of eligibility. Closed accounts are included through the completion of the last full calendar month (quarter prior to June 30, 2003) of management. Performance figures include all accounts under the Company's management that are defined by the profile described above. No selective periods of performance have been used. The creation date of the Wright Large Cap Growth Equity Composite is December 31, 1999.

Return Calculation and Fees. Returns are calculated using a time-weighted rate of return formula for each account included in the composite. Monthly / Quarterly rates of return for eligible accounts are calculated as follows: The rate of return of the account is derived by dividing the change in the market value, less cash flows, by the prior day's market value. The daily rates of return are linked together to compute the monthly / quarterly return. Prior to June 30, 2003 all eligible individual account's quarterly returns are asset weighted using the beginning-of-quarter market values to arrive at a quarterly composite return. After June 30, 2003 till September 30, 2003 all eligible account's monthly returns are asset weighted using beginning -of-month market values to arrive at a monthly composite return. After September 30, 2003 all eligible accounts are combined and treated as a single account as described above to compute the daily rate of return. The monthly and quarterly returns are determined by compounding the daily returns. The annual return is determined by compounding the four quarterly composite returns. Net returns are calculated as net of actual investment management fees.

Composite Dispersion. Composite dispersion represents the consistency of the Company's composite performance results with respect to individual portfolio returns within the composite. The Company utilizes an Asset-Weighted Standard Deviation calculation to measure dispersion. Only portfolios that have been managed for the full calendar year have been included in the dispersion calculation.

Other Matters. No alteration of composites as presented here has occurred because of changes in personnel or other reasons at any time. The composition of a composite has been amended only where a client retains or dismisses WIS or where a change in the investment strategy of an account so dictates or when the account market value falls below the composite minimum due to a cash flow. The asset base used to calculate the percent of total assets includes non-discretionary and non-fee-paying accounts managed by WIS. Balanced portfolio segments are included in this composite up to September 30, 2003. Cash has been allocated for such accounts at no more than 3% of the average portfolio segment market value for each performance period presented, as this is the average balance maintained in separate accounts included in the composite. A complete list and description of all composites maintained by WIS is available upon request. Policies for valuing portfolios and preparing compliant presentations are available upon request. Clients or prospective clients should not assume they will have an investment experience similar to that indicated by the composite's past performance results.
